The top plate is the tool

10 REASONS TO SWITCH TO RevHD

1 THE TOP PLATE IS THE TOOL

No more searching for the right tool. Use any flat object to install the RevHD seal.

FLIP THE TOOL PLATE OVER

2 FLEX-DESIGN NO MORE COCKED SEALS

The #1 cause of premature seal failure is a cocked seal. RevHD's unique flex design allows the i.d. of the seal to move with the hub.

3 NO-QUESTIONS-ASKED WARRANTY

And if the shop technicians take our FREE Online Training Course, our warranty includes the brake kit!

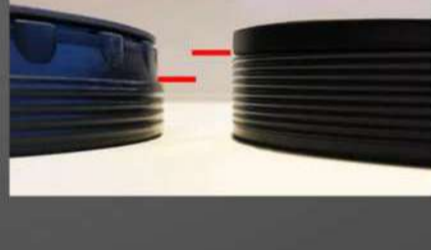

4 FREE TUBE OF SEAL BOND

RevHD's proprietary formula causes the rubber to expand and fill in imperfections on the hub bore and spindle shoulder.

5 BUILT STRONGER

RevHD seals cover more surface area on the hub bore and spindle shoulder; and have more internal sealing points to protect against leaks.

6 SIMPLE PART NUMBERING SYSTEM

RevHD's simple part numbering system tells you the application. There is even a cross-reference right on the label.

7 FILL TEMPLATE ON BACK OF BOX

For hubs using semi-fluid grease, our box shows the fill level and holds the grease in place until you are ready to insert the outer bearing.

8 BOX TOP REDEMPTION PROGRAM

Collect box tops from RevHD products and redeem them towards FREE merchandise. Visit: www.RevHD.com/boxtops

9 ALL SEALS ARE THE SAME PRICE!

Don't pay more for the drive & steer seal. Easier to quote, easier to track cost. And better pricing than the competition.

10 75 YEARS COMBINED EXPERIENCE

RevHD was established by veteran seal manufacturing revHDs who partnered to develop a better wheeling seal. RevHD is a family company committed to customer service. We stand behind every product we make.
